PHP Developer

About me

Hello! I'm PHP Developer with 3 years of experience in web and software development. Proficient in Laravel with hands-on experience in database design, API development, and third-party integrations. Currently focusing on transitioning to Symfony to deepen my expertise.

Work experience

Fullstack developer · RTS

June 2023 - Present · 1 year 9 months

An outsourcing company focused on delivering innovative IT solutions for enterprises, with a primary emphasis on CRM systems. Collaborated within a team consisting of 3 developers, 1 QA tester, 2 system administrators, and a project manager.

Developed and implemented a system to manage tax accounting for landowners, ensuring efficiency and accuracy. Personally contributed to:

- Land and Entity Management: Designed functionality for accounting all land parcels and associated individuals or legal entities.

- Tax Calculation: Implemented customizable tax formulas to meet regulatory requirements.

- Document and Report Generation: Automated the creation of tax documents and detailed reports.

- Integration: Integrated with mPay, mLog, mNotify, and GisLocal.

Developed a comprehensive certification system for election participants. Personally responsible for:

- Certification Management: Enabled the creation of sessions, exams, and templates for random question selection by topic.

- Exam Execution: Implemented timed exams with secure random question generation.

- Certificates: Automated certificate generation with real-time validation.

- Reporting: Created PDF and Excel reports with participant statistics and results.

- Integration: Integrated with mLog, mNotify, and mPass (SSO and electronic signature authentication).
