Frontend Developer, React

Despre mine

I successfully studied at the Moscow Institute of Electronic Engineering (MIET) in the specialty

"Informatics and Computer Engineering" from 2015 to 2019. During this time, I received a

high-quality education, completing my studies with excellent results.

My professional history as the frontend developer began in 2020, when my superior got a unique

idea. We sought to develop our own program, similar to the famous ARIS, which uses as a platform

to construct the business process. At that time, we did not have the specialized developers, and

that's when my boss suggested me to do frontend development of our application.

Several years have passed, since then. Today, I am the only frontend developer of the Aspra

Standard project team. My work covers a wide range of responsibilities, including designing and

developing a user interface for the program, as well I am rarely to develop the scripts for the ARIS

platform.

I was attracted to this profession for several reasons. Firstly, I like to see the results of my work. It's

a nice feeling when my efforts turn into real, physical products. Every button, every animation,

every interface is my step in this digital world.

In addition, the work of the frontend developer offers me the opportunity to implement creative

ideas. I have to give life to design concepts, move them from imagined to real, functioning

applications. This is what inspires me continuous to improvement.

The ability to work with the ARIS platform by creating scripts also adds interest to my role. This

developing allows me to go deeper into the world of development and interaction with other

technical aspects of our project.

In general, the frontend development has become for me not only a profession, but also a source of

pleasure and creativity. I am proud of how far we have come

with our project, and look forward to
the new challenges and opportunities for the growth in this exciting area.

Experiența profesională

Frontend-Developer · Asprasoft · Москва
Ianuarie 2020 - Prezent · 5 ani 2 luni

- Optimize the interface for different devices and screens to make the web application look good.
- Provide fast page loading, optimize code and resources to improve performance
- Checking the functionality and appearance of the interface, detection and elimination of errors,
adaptation to different browsers and devices
- Collaboration with designers to implement design concepts and backend developers to integrate
frontend with server part of application
- Support and update the interface, making changes according to new requirements or functionality
- Development of scripts that performed important tasks within the ARIS platform
- Interaction with clients, active identification of their needs and adaptation of solutions to their
specific requirements
- Monitoring new trends and technologies in development fronts, continuous training and
improvement of the skills

Technical consultant · Dainova Consulting · Москва
Octombrie 2018 - August 2022 · 3 ani 11 luni

- Working with customers, colleagues to solve technical problems, providing, recommending the
use of products or services, and troubleshooting problems
- Preparation of technical documentation, usage instructions, manuals, as well as other materials
that will help users and colleagues to better understand technical aspects
- Participate in research or development projects to improve existing technical solutions or create

new ones
- Participation in maintaining technical systems' compliance with regulations and standards,
including legislation and industrial requirements
- Work with other members of the team, including developers, engineers, administrators to ensure
the efficient operation of technical systems and equipment
